

## Wireless Inventory System

### Software Intensive Systems Engineering (ISIS)

The wireless inventory system developed by *Software Intensive Systems Engineering* allows knowing the stock of machinery and refills at all time and in an automated way. Placing a simple label in every element, it is possible to perform **inventory in a few minutes** through a wireless reader. The software of the system allows functions as knowing inventory differences, to establish dates of entry or exit, specification sheet or any other useful information.

de Sistemas Intensivos en Software

### Benefits of the system:

- Simple and efficient inventory of stores and computer equipment.
- It is valid for any type of material: machinery, pieces, boxes, furniture, computer equipment and so on.
- Record the entry and exit of material and calculation of the inventory differences.
- It facilitates a more efficient management of the stock, saving time and cost.

### System features:

- The system is for users without computer knowledge.
- It is based on **RFID** (Radio Frequency Identification) technology.
- The software allows the inventory control and shows relevant information of every element.
- It can be integrated with legacy systems, as B2B systems.

*Software Intensive Systems Engineering (ISIS)* is a technological company specialized in wireless communications. Our wide experience in R&D project development allows us to apply state-of-the-art technologies to improve the productivity.

If you want to know more details about our products and solutions, get in touch with us using the e-mail: [info@isingeneria.com](mailto:info@isingeneria.com) or the telephone (+34) 911 433 083.
